

# **M/S M.P. FIRECLAY INDUSTRIES**

**Baghraji , Dis- Jabalpur (M.P)**

## **Executive Summary**

### **1.0 General**

---

1.1 The Government of India, Ministry of Environment & Forest has allotted Baghraji Block for mining of fireclay to M/s Shri Fateh Khan The latter has proposed to establish a Production of Fireclay capacity 6950 MT/Annum. The Mining lease area is a part of small basin and distantly surrounded by high hillocks. It is gently undulating with low gradient into the adjacent small rain fed tanks. The surface plan with elevation contours shows the elevation.

1.2 M/s Shri Fateh Khan the project proponents is a firm having registered office at Naya Mohalla, Jabalpur District. The State Government of Madhya Pradesh has identified 10.926 Ha. of the lease to the proponent in village Bhghraji , Tahsil Jabalpur, District Jabalpur, Madhya Pradesh . Mining Plan for the said area has been approved from the competent authority. The proponent envisage to develop mining activities based on the available reserves of ore in central India. The proponent is committed to operate systematic and scientific mining operations making optimum utilization of the resources. Needless to mention that the mining activities shall be carried out as per the mandatory laws and regulation prevailing.

### **2.0 Proposed Mining**

---

The total mining lease area proposed is **10.926 Ha**. The proposed area is located in the jurisdiction of Village Baghraji, Dist – Jabalpur. M/s Shri Fateh Khan the year 1988 vide letter no. M.P/JBP/F.clay/05/99-2000 dated 14/12/1999. The last mining plan was prepared under rule 12 of MCDR 1988 and approved by Indian bureau of mines.

**2.2** At present in the area mining as well as dumping of overburden, are being carried out in haphazard manner. As the opening of pit as well as dumping are scattered and it does not give good impression about the environment management. It is proposed to dump the overburden in systematic manner along the boundaries where a space is earmarked for this purpose. Any unsystematic dumping as well as opening of pits will be avoided, so that mining activity does not violate the aesthetic sense of environment.

### **3.0 Environmental Parameters**

**3.1** The Fireclay is seen well exposed on the hill situated in the south western part of the area. These are buff in color, massive, compact and hard in nature, small, detected outcrops of fireclay are seen on the geological plan. The Fireclay is seen exposed in few trail pits it is about 6-7m depth. The Fireclay is ash white in colour, massive, compact and fine grained. The fireclay is white to grey in colour, massive, compact and fine grained. Cross joints are common in fireclay. At places thin intercalations of phyllite are seen within the fireclay.

**3.3** **Climate:** Sub –tropical climatic condition prevail in the area. Maximum temperature recorded during summer is 45<sup>0</sup>C And the minimum temperature recorded during winter is 7<sup>0</sup> C.

**3.4 Rainfall:** The lease area is located in small and backward village of Jabalpur and information for five years is not readily available.. About 1240mm average annual rainfall has been recorded in the area which is spread over from June to September

**3.5** The entire study area is covered under one tehsil of JABALPUR district in Madhya Pradesh state. Totally 8 villages are covered under the study area with the proposed mine site as the center. In this study, the geographical area of all the 16 settlements covered under 10 km radius circle is taken into consideration though a couple of villages are covered partially in the study area. The proposed area is Govt. of Madhya Pradesh revenue land with plain topography and without vegetation. The proposed area is predominantly covered with alluvial soil and murrum having thickness 0.2m to 0.5m there will be change in the land use pattern after the mining activity carried out in the area. There will be working pit developed due to excavation in the area. Following will be the land use pattern after 5 years and as envisaged presently.

**3.6** The existing method of mining is of manual nature and there will not be any deployment of heavy machinery or heavy blasting which will create dust or air pollution.

#### **4.0 Environment Management Plan**

**4.3** It is already mentioned that there will not be much generation of waste which is required to be treated properly or stored securely to prevent its spillage to the surrounding. At present no such situation is envisaged.

- 4.4** The area small and dumps will be established by developing plantation on it as well as on the existing dumps so that spillage of dumps does not occur in the surrounding.

**5.0 SOCIO ECONOMICS:**

The small scale mining operations will not have any major effect on the socio-economics of the area. It will provide employment to the local people and will help in uplifting their living standards. Due to this reason there will be more improvement in the living condition of the people, there will be more employment in the area

**HISTORICAL MONUMENT:**

As no such monuments are situated in the vicinity of the area, the question of any adverse effect on them does not arise.

**5.1 Occupational Health and Safety**

The method of mining is in small scale and of manual nature. There will not be any deployment of heavy machines in the area for carrying out mining operation which will create noise pollution, air pollution or any other operational hazards due to presence of machines. Precaution is required to be observed during drilling with jack hammers against dust or during blasting to be in the safe distance. Apart from these no other factor are envisage during future mining operation.

**5.2 Human Settlement:**

In this region there will be mining activities in area. Though there is local populace available but due to increase in demand or increase in mining activity and there is possibility of migration of labor From surrounding area. For this reason there will be increase in the human settlement of the area. Due to increased revenue earning in the area there will be development of infrastructural facilities such as transport, road, housing, schooling as well as hospitals .

. The details of human settlement within 5 Km radius of the area are given below:

<b>Name of village</b>	<b>Population</b>	<b>Main Occupation of people</b>
Kundam	4293	Agriculture
Bhajiya	754	“
Chikhali	216	“
Imlai	1297	“
Jamgaon	1113	“
Bhagharji	4778	“
Deori-Khurd	1757	“
Chapara	237	“

## **6.0 Summation**

**6.1** The comprehensive baseline data collected for various environmental parameters shows that the manual opencast mine will not have any substantial impacts on these parameters. All these parameters are expecting to stay within permissible limit.

- 6.2** The anticipated working life of the mine will be about 221 years including construction period. Only impact, on surroundings, during life of the mine will be noise generated during blasting & drilling. There will not be any heavy deployment of machines in the area for mining operation as the mining will be in very small scale.
- 6.3** Due to mining activity in area there will be generation of employment to the local people. The mine will open doors of economic development and prosperity to the surrounding area.
