Water/Waste Water Sample Collection Guideline
General Sampling Guideline

- Prepare a Sampling and Analysis Plan which describes the sampling locations, numbers and types of samples to be collected, and the quality control requirements.

- Before proceeding to the sampling ensures that sampling equipment, preservatives, and procedures for sample collection are ready and acceptable. –Annexure 1

- The acids and bases used in preservation of many types of samples are dangerous and must be handled with care.

- The sample should be collected where the water/wastewater is well mixed. Therefore, the sample should be collected near the centre of the flow channel, at approximately 40 to 60 percent of the water depth, where the turbulence is at a maximum and the possibility of solids settling is minimized.

- While conducting wastewater sampling, the following information will also be obtained: Annexure 2
  
  - Field measurements -- pH, dissolved oxygen, total residual chlorine, conductivity and temperature
  
  - Flows associated with the samples collected -- continuous flows with composite samples and instantaneous flows with grab samples
- Diagrams and/or written descriptions of the wastewater treatment systems (if available).

- Photographs of pertinent wastewater associated equipment, such as flow measuring devices, treatment units, etc.

- Process control information on the wastewater treatment process (if applicable).

- Completion of applicable forms required during specific investigations.

All observations, measurements, diagrams, etc., will be entered in field logbooks.

- Fill out completely

  - Sample name, date and time of sample
  - Sampler name and signature
  - Type of sample
  - Preservative
  - Bottle and volume
  - Analysis needed
Sampling for Biological Contaminants
Total coliforms; Fecal coliforms; *E. coli*; Enterococci; Heterotrophic Bacteria; or Coliphage

**Bottle to Use**
Sterile 125 or 150 ml glass bottles must be used.

**Preservatives to Use**
Sodium Thiosulfate if sample is chlorinated and Cool to < 6 °C (< 50 °F)

**Holding Times**
Holding times are generally very short Deliver samples to the lab the day of collection if possible or ship via overnight delivery.

**Sampling Instructions**
Wear gloves when collecting samples. Do not rinse the bottles. The bottles are sterile so care must be taken not to contaminate the bottle or cap. Once the distribution line is flushed and the flow reduced, quickly open the bottle (but do not set the cap down), hold the cap by its outside edges only, and fill the sample bottle to just above the 100 ml line leaving a one inch headspace. Cap the bottle immediately and place it into an ice box with ice for transportation to the laboratory.

**Some Tips on Collecting Samples**
- Remove any attachments on the water source
- Samples must always be collected directly into the prepared container
- The bottle should be held near the base and filled to within about one inch of the top without rinsing and recapped immediately.
- During sample collection, the sample container should be plunged with the neck partially below the surface and slightly upward.
- The mouth should be directed against the current.
- Do not rinse or overfill container
- Always collect cold water; never sample hot water
- Do not touch the inside of the sample bottle or its cap
Sampling for Nutrients, Anions, and other Analytes

Acidity, Alkalinity, Biological Oxygen Demand, Bromate, Chloride, Chlorite, Color, Conductivity, Fluoride, Nitrate, Nitrite, Odor, o-Phosphate, Residues, Silica, Sulfate, Surfactants, Total solids, Total Dissolved Solids, Total Suspended Solids, Turbidity

Bottles to Use

Plastic or glass bottles may be used but plastic is preferred.

Preservative to Use (as per Table 1)

Cool to ≤ 6 °C

Holding Times

Most of these analytes have short holding times. Deliver samples to the lab the same day if possible or via overnight delivery. Check holding times for the specific analytes of interest. (as per table 1)

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves and eye protection when collecting samples. Rinse the bottle and cap three times with sample water and fill the bottle to within one to two inches from the top. Place the sample into an ice box with ice for immediate transportation to the laboratory.
Sampling for Nutrients Requiring Acid Preservation
Ammonia; Kjeldahl and Organic Nitrogen; Total Phosphorus

Bottles to Use

Plastic or glass bottles may be used but plastic is preferred.

Preservative to Use

Sulfuric Acid (H$_2$SO$_4$) to pH < 2

Holding Times

28 days

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves and eye protection when handling acids and while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions as provided in Table 1. The bottle should be filled to within one to two inches from the top. Deliver or ship the sample to the laboratory.
Sampling for Cyanide

Bottles to Use

Plastic or glass bottles may be used but plastic is preferred.

Preservatives to Use

0.6 g Ascorbic Acid if sample is chlorinated and Sodium Hydroxide (NaOH) to pH >12 and Cool to ≤ 6 °C

Holding Time

14 days

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves and eye protection when handling acids and other preservatives and while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions provided in Table 1. The bottle should be filled to within one to two inches from the top. Place the sample into an ice box with ice for delivery or shipment to the laboratory.
Sampling for COD

Bottles to Use

Glass bottles are preferred but plastic may be used as well.

Preservatives to Use

Analyse as soon as possible or add Sulfuric (H2SO4) to pH <2 and Cool to ≤ 6 °C

Holding Time

28 days

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves when handling acids and other preservatives and while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions provided in Table 1. The bottle should be filled to within one to two inches from the top. Place the sample into an ice box with ice for delivery or shipment to the laboratory.
Sampling for Metals

Bottles to Use

Plastic is preferred.

Preservative to Use

Nitric Acid (HNO₃) to pH < 2

Holding Times

28 days for mercury, 6 months for other metals

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves and eye protection when handling acid and while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions provided in Table 1. The bottle should be filled to within one to two inches from the top. Deliver or ship the samples to the laboratory.

Note: If samples are not acid preserved, they must be received by the laboratory within 14 days of sampling.
Sampling for Organic Compounds
PAHs, Pesticides

Bottles to Use

Glass bottles with glass or PTFE lined cap must be used.

Preservatives to Use

Add 1gm ascorbic acid/l if residual chlorine present Cool to ≤ 6

Holding Times

7 days until extraction, and 40 days after extraction.

Sampling Instructions

Collect the required volume of sample for analysis. Wear gloves and eye protection when handling preservatives while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions provided in Table 1. The bottle should be filled to within one to two inches from the top. Place the sample into a cooler with ice for delivery or shipment to the laboratory. Place the sample into an ice box with ice for immediate delivery or shipment to the laboratory.
Sampling for Oil and Grease

Bottles to Use

Glass bottles with glass or PTFE lined cap must be used.

Preservatives to Use

Add HCl or H₂SO₄ to pH < 2 Cool to ≤ 6 °C but do not freeze

Holding Times

28 days

Sampling Instructions

Oil and grease may be present in wastewater as a surface film, an emulsion, a solution or as a combination of these forms. Since it is very difficult to collect a representative sample for oil and grease analysis, the sampler must carefully evaluate the sampling location. The most desirable sampling location is the area of greatest mixing. The sample container should be plunged into the wastewater using a swooping motion with the mouth facing upstream Collect the required volume of sample for analysis. Wear gloves and eye protection when handling preservatives while collecting samples. If the bottle contains a preservative, do not rinse the bottle. If the preservatives are not included in the bottle, rinse the bottle and cap three times with sample water, fill the bottle, and then carefully add the preservatives following the instructions provided in Table 1. The bottle should be filled to within one to two inches from the top. Care should be taken to ensure that the bottle does not over fill during sample collection. Place the sample into a cooler with ice for delivery or shipment to the laboratory.

</table>

Note:
- P = Plastic (polyethylene or equivalent);
- G = Glass;
- G(A) or P(A) = rinsed with 1 + 1 HNO₃;
- G(B) = glass, borosilicate;
- PTEF = Polytetrafluoroethylene, Teflon
- FP = Floropolymer
- G(S) = glass, rinsed with organic solvents or baked.
- g = grab; c = composite.
- Cool = storage at >0°C, ≤6°C; in the dark;
- analyze immediately = analyze usually within 15 min of sample collection.
- Listed preservation techniques are for guidance only if there is discrepancy between mentioned in table and method, the information in the current method takes the precedence.
Field Sampling Checklist (Example)

a. General
- Map of station/locations
- Authorization (letter, etc.)
- Field notebook
- Waterproof pens, markers and pencils
- Masking tape and rubber bands
- Trip routing forms
- Field data sheet
- Graphite lubricant (not oil) for locks and well caps
- First aid kit, knife
- Insect repellent (wash hands thoroughly after applying)
- Hat, sunscreen, drinking water
- Sunglasses or safety glasses
- Leather gloves
- Steel-toed boots, rubber boots
- Rain gear
- Toolbox with basic tools
- Tape measure
- Flashlight and extra batteries
- Cellular phone with GPS
- Uniform
- Rope, Bucket
- Fire extinguisher (type B)
- Helmet or hard hat

b. Field Parameter Measurement Equipments
- Stopwatch
- Calculator
- Non-mercuric thermometers
- Flow meter
- GPS
- pH meter and buffers, pH indicator strips
- Turbidity meter
- Rain gauge
- Temperature, Conductivity, Redox, Dissolved Oxygen meters, probes and batteries
- Ruler
- Copies of manufacturers manuals for field equipment
- And other appropriate kit(s)

Note: No claim is made that this list is comprehensive. It is a suggestion for consideration and requires tailoring to individual needs.
